

Laser Treatment of Veins & Other Vascular Lesions - Price List

The 1064nm Nd:YAG laser on the GentleMax PRO laser is used in this circumstance to reduce the presence of small spider leg and deeper facial veins. The 1064nm wavelength penetrates through the skin and the energy from this laser is absorbed by the haemoglobin in the leg/facial veins and this closes it down. Note that only spider leg veins and not varicose veins are treatable with laser. It generally takes 1 to 2 treatments spaced at monthly intervals to improve the appearance of leg/facial veins. Some of these veins disappear immediately during treatment, but some can be partially disrupted and take a few weeks to reduce.

Consultation & Test Patch €20.00 - refundable from treatment price

1 area approx. 3x3cm or less OR up to 2 single spots - €70

2 areas approx. 3x3cm or less OR between 3 and 5 single spots - €120
