

Superficial Level 2 Chemical Peel – Professional Strength

Jessner Peel

Jessner's Peel is a superior treatment designed to remove the entire epidermis. A Jessner peel consists of mild peeling agents that can be used to lighten areas of hyperpigmentation and to treat sun damaged skin, mild to severe acne, mild scarring, discoloration and moderate wrinkling.

This chemical exfoliation can be performed in a single layer (very superficial exfoliation) or in multiple layers (superficial to medium exfoliation).

For best results a treatment course of 4-6 sessions is recommended.
